Self extinguishing filter tipped cigarette - incorporates porous clay plug between tobacco and filter tip preventing formation of unpleasant fumes

DELVO B 20.02.79-DT-906417

(28.08.80) A24d-01/10

The filter tipped cigarette which may have a filter tip with composite sections includes an insert between the inner section and the tobacco. This insert can be of porous clay or other suitable material which extinguishes the glow of the tobacco before it reaches the filter.

This ensures that the cigarette is extinguished without giving off unpleasant fumes after the cigarette end has been discarded, e.g. placed in an ash tray. The system prevents the atmosphere from being polluted and protects the smoker. 20.2.79. as 906417 (4pp349)
